

Concierge 4-Passenger Gas Features & Benefits

Yamaha Built 357F Gasoline Engine

We're the only golf car manufacturer that builds its own engines. And this one is a beauty: at 357cc's, producing 11.4 horsepower, it's the industry's largest and most powerful, providing 27% more hill-climbing power as the competition. And yet it's quiet and refined, virtually vibration free, with low emissions. If we're going to build our own, it's a good thing we're Yamaha.

Headlights & Tail Lights

Stylish, sealed halogen headlights and tail lights are standard equipment.

Floor Mounted Horn

The conveniently located horn is close to the accelerator and brake pedals. A quick turn of the ankle lets them know you're

coming.

Filterless Oil System

Our Yamaha gasoline engines use a splash-style positive oil lubrication system that eliminates the need for an oil pump. And with no oil pump to protect, there's no need for an oil filter. You save on maintenance, you don't have to buy new filters, and you don't have to figure out how to dispose of the old ones.

HybriCore™ Chassis

How do you make a chassis nearly 20% lighter and 2.5 times stronger? We mated an automotive, ladder-style, 100% robotically welded frame, protected by an 18-step paint process, with a polypropylene structural floor. Integrated into the floor, the battery box surrounds the batteries, eliminating a corrosion point. A self-contained pedal box gives the pedals top and bottom protection from dirt, debris and stray golf tees.

Automotive-Style Dash

The auto industry spent a hundred years getting this right, so why not use it? We gave it four cup holders to hold different-size cups; a center storage area for wallets, cell phones, and personal items; six ball holders; six tee holders; and a big, easy-to-clean storage compartment on each side.

EnduraDrive™ Transaxle with Internal Disc Brake Technology

An industry first, inspired by the Yamaha ATV. A completely enclosed disc brake system that eliminates brake drums and shoes, needs only one brake cable, and is projected, based on extensive testing, to have an incredibly long life with essentially no maintenance.

Largest Most Comfortable Seat in the Industry

Deep, supportive contours are intended to help hold occupants in place while the car is moving. Designed to accommodate occupants of all different heights and sizes, it's made of pure, supple foam bonded to a seamless, fabric-backed vinyl cover, and the polypropylene seat base is strengthened with plated steel inserts. Won't sag or warp, stands up to repeated pressure

Serving Minnesota, Wisconsin, North Dakota and South Dakota.**

washings, and remains the most comfortable seat in the
business despite daily abuse.

Rear Seat Grab Handle

Constructed of durable, powder coated steel, the rear seat grab handle provides added security and comfort for rear seat passengers.

Mid-Body Seat Storage

Conveniently located under the front seat, this storage compartment gives you plenty of extra storage space.

Low Oil Warning Light

Not that you'll ever need it, but in the event your vehicle runs low on oil, the dash-mounted warning light will let you know in plenty of time.

Low Cost of Ownership

Low cost of ownership is a priority at Yamaha. So our vehicles boasts the lowest cost of ownership in the industry. The lowest. Period.

Tru-Trak II™ Fully Independent Front Suspension

No other golf car has a suspension like this. We designed a maintenance-free suspension using automotive-style, coil-over-shock struts to minimize roll and deliver a smooth, comfortable ride. Sooner or later, some golfer will offer to trade his car for it.

Best Front & Rear Bumpers in the Industry

You know and we know: things happen out there. So we made our bumpers with thicker walls and textured surfaces to withstand mishaps. They're the same height front and rear to minimize damage. They release air on impact; in fact, they're 5 mph rated. And if worse comes to worst, you can replace them by removing only two bolts.

Built-In Transaxle Protection

Sometimes work takes you off the beaten path so we designed our cast aluminum transaxle case with integrated impact protection to fend off the hazards that come from underneath.

Maintenance-Free Rack-and-Pinion Steering

Steering this nimble and responsive was once found only on high-performance sports cars. Our version is permanently greased with sealed bearings and is virtually maintenance free.

One-Piece Fender Well with Integrated Splash Guards

Inner fenders and splash guards are made of one-piece seamless plastic and are designed to keep mechanical and electrical components from getting wet. The rear wells include integrated mud flaps to keep occupants and golf bags from being splashed on.

Removable Floorboard Access Panel

Forget the floor jack for inspecting the brake and accelerator pedals. This access panel makes it easy. Integrated brushes prevent debris and foreign objects from entering.

Greaseless Chassis

Sealed bearings, automotive grade tie-rods and permanently lubricated steering components that never need greasing save you time and money. That's smart design.

Flexible, Durable Body Panels

Our body panels are made of custom-formulated thermoplastic olefin providing superior flexibility, durability, and cold weather resistance. Panels lock together and mount with fewer hardware to make removal easy. They are robotically painted with a two-part topcoat of high-luster, automotive-grade polyurethane paint that is closely matched to the body panel.

Built-In Transaxle Impact Protection

Our cast-aluminum transaxle case is designed with integrated impact protection. You don't need a skid plate to fend off the hazards that come from underneath. Our hardened case can take care of itself.

Easy-To-Clean, Durable One-Piece Floor Mat

The point was to make it easy to clean. So we made it one piece, covering the floorboard and footrest area. We made it from rubber to provide cushioned comfort for the occupants.

Premium Tread Tires

Check out the tread pattern on our four-ply tires. It's designed to provide superior on-course performance while minimizing turf compaction, the perfect combination.

Easy-To-Clean Cup Holders

You know that really gross stuff that collects in the bottom of cup holders? We don't have that. Our cup holders are built with drain holes that keep liquids and debris from accumulating. And they're removable, so cleaning them is a snap.

Largest Rear Access Panel

If you need to access the starter generator, governor and transaxle on the gas car, or the motor control unit and vital electrical components on the electric car, you have the advantage of the largest access panel in the business. Open it up and make it happen.

Easy-Grip Steering Wheel

It's not just that it's thick, contoured, and textured for easy gripping. It's not even that we integrated four tee holders, a scorecard holder, and a pencil holder into the design. It's the way we carefully positioned the pencil holder to avoid scratched wrists and torn golf gloves. That's what we mean by attention to detail.

Wheel Covers

Standard 8" wheel covers in a silver metallic finish add the perfect finishing touch to the Fairway Lounge.
